

TeqMD — Registration & Setup Checklist

Philippines-first technology advisory platform

Quiz → recommendation → booking, with admin CRM, payments, email, video meetings, and optional Fathom recordings.

Generated: May 30, 2026

1. Core platform (required for production)

What to register / provision	Why	Where to configure
MongoDB Atlas	All persisted data (quiz, leads, bookings, settings, logs)	MONGODB_URI, MONGODB_DB_NAME
Hosting (Railway recommended)	Runs Next.js API + marketing + admin	Deploy repo; set NEXT_PUBLIC_APP_URL
Domain (recommended)	Metadata, payment return URLs, webhooks, emails	NEXT_PUBLIC_APP_URL; optional CHECKOUT_ALLOWED_APP_BASE_URLS

Atlas extras (create in Atlas console)

- Network access for your host IPs
- Indexes: quiz_sessions, quiz_audit, visitor_sessions, leads, bookings (partial unique on serviceKey + startsAt), blog_posts, diagnostic_round_cache (vector index if using semantic cache)

Server secrets (generate yourself — not third-party signups)

Environment variable	Min length	Needed for
ADMIN_TOKEN	long random string	/admin and /api/admin/* (503 in production if unset)
PAYMENT_CREDENTIALS_MASTER_KEY	32+ characters	Saving payment API keys in Admin → Payments
EMAIL_CREDENTIALS_MASTER_KEY	32+ characters	Saving email API keys in Admin → Email
MEETINGS_CREDENTIALS_MASTER_KEY	32+ characters	Zoom / Meet / Teams + Fathom credentials

Optional but recommended:

- CRON_SECRET — protects POST /api/cron/payment-holds
- BOOKING_SESSION_ACCESS_SECRET — signed links in confirmation emails
- QUIZ_SESSION_URL_SECRET — opaque quiz session URLs in marketing

Scheduler

Register a **Railway Cron** (or equivalent) job:

```
pnpm --filter web cron:payment-holds
```

Use the same environment variables as the web service. Optional HTTP trigger:

```
curl -X POST "https://YOUR_APP/api/cron/payment-holds" \
-H "Authorization: Bearer $CRON_SECRET"
```

2. Payment gateways (pick one or more)

Supported: **PayMongo**, **Xendit**, **HitPay**, **PayPal**

For each enabled provider:

1. Create a **business/developer account**
2. Obtain **API keys** (test + live as applicable)
3. Register **webhooks** at your public app URL

Webhook URLs

Gateway	Webhook URL
PayMongo	{APP_URL}/api/webhooks/paymongo
Xendit	{APP_URL}/api/webhooks/xendit
HitPay	{APP_URL}/api/webhooks/hitpay
PayPal	{APP_URL}/api/webhooks/paypal

Admin → Settings → Payments — credential fields

Gateway	Fields to save
PayMongo	secretKey, optional secretKeyTest, webhookSecret
Xendit	secretKey, webhookToken
HitPay	apiKey, optional apiKeyTest, salt
PayPal	clientId, clientSecret

Also configure: payments on/off, policy (`pay_after_hold` vs `manual_confirm`), hold window, checkout amount, sandbox mode.

Development: Without gateway credentials, checkout uses a mock adapter when `NODE_ENV=development` .

3. Transactional email (pick one provider)

Providers: **Resend**, **Postmark**, **SendGrid** — Admin → Settings → Email

Provider	Register	Admin credentials	Env fallback
Resend	Account + verified sending domain	apiKey, from	RESEND_API_KEY + EMAIL_FROM when active provider is None
Postmark	Server + verified domain	serverToken, from	—
SendGrid	Account + verified sender/domain	apiKey, from	—

Optional env:

- `BOOKING_CONFIRMATION_BCC` — BCC on booking confirmations
- `EMAIL_SANDBOX_TO` — when admin Sandbox mode is on (e.g. `delivered@resend.dev`)

Emails sent: booking confirmation, payment reminder, Fathom meeting notes, support-report staff notifications.

4. Video meetings (pick one active provider)

Admin → Settings → **Meetings**. Only the **active** provider provisions links for paid bookings.

Provider	Register	Admin credential fields	Env fallback
Zoom	Zoom Marketplace Server-to-Server OAuth app; licensed host	accountId, clientId, clientSecret, hostUserId	ZOOM_ACCOUNT_ID, ZOOM_CLIENT_ID, ZOOM_CLIENT_SECRET, ZOOM_HOST_USER_ID
Google Meet	Google Cloud project, Calendar API, OAuth offline refresh token	clientId, clientSecret, refreshToken, optional calendarId	GOOGLE_MEET_* (see docs/google-meet-oauth-setup.md)
Microsoft Teams	Azure AD app, admin consent, Graph permissions	tenantId, clientId, clientSecret, organizerUserId	MICROSOFT_TEAMS_*

Note: If active provider is **None**, only Zoom environment variables are used (legacy). Google Meet and Teams must be selected as active.

5. Consultation recordings (Fathom)

Admin → Settings → **Recordings** — see `docs/fathom-setup.md`

Step	Action
Fathom account	Same account that hosts calls; connect Zoom/Meet/Teams; enable visible notetaker
API access	Generate API key (User Settings → API Access)
Webhook	<code>{NEXT_PUBLIC_APP_URL}/api/webhooks/fathom</code>

Admin fields: `apiKey` , `webhookSecret` , `hostEmail` ; enable recordings + opt-in price.

Env fallback: `FATHOM_API_KEY` , `FATHOM_WEBHOOK_SECRET` , `FATHOM_HOST_EMAIL` ,
`FATHOM_MATCH_WINDOW_MINUTES` , `FATHOM_ENABLED`

Uses `MEETINGS_CREDENTIALS_MASTER_KEY` for credential encryption.

6. AI — OpenAI (optional but needed for full quiz/advisor)

Feature	Environment variables
Guided diagnostic rounds	<code>OPENAI_API_KEY</code> , optional <code>OPENAI_DIAGNOSTIC_MODEL</code> (default <code>gpt-4o-mini</code>)
Admin advisor chat	<code>OPENAI_API_KEY</code> , optional <code>OPENAI_ADVISOR_MODEL</code> (default <code>gpt-4.1</code>)
Semantic diagnostic cache	<code>OPENAI_API_KEY</code> , Atlas Vector Search index, <code>DIAGNOSTIC_CACHE_VECTOR_INDEX_NAME</code>

Register: OpenAI platform account, API key, billing enabled.

7. Analytics

Register	Environment variable
Google Analytics 4 property	<code>NEXT_PUBLIC_GA_MEASUREMENT_ID</code>

Analytics loads only after cookie consent for the analytics category.

8. Support reports

No separate SaaS — uses your transactional email stack.

Config	Location
Staff notification inboxes	Admin → Settings → Support
Env fallback	<code>SUPPORT_REPORT_TO</code>

9. Customer accounts

Marketing login/register is **built-in** (email + password stored in MongoDB). No Clerk, Auth0, or similar required unless you add one later.

10. Native app (Expo)

Register	Notes
Apple Developer Program	<code>EXPO_PUBLIC_IOS_BUNDLE_ID</code> (default <code>com.techmd.native</code>)

Google Play Console	EXPO_PUBLIC_ANDROID_PACKAGE
Expo (optional)	If using EAS builds

Set `EXPO_PUBLIC_API_BASE_URL` in `apps/native/.env.local` to your deployed web API.

11. CMS / legal pages

- Blog: Admin → Blog (MongoDB — no external CMS)
- Optional legal embeds: `PRIVACY_POLICY_BLOG_POST_ID` , `TERMS_OF_USE_BLOG_POST_ID`

Admin Settings → external services (quick reference)

Admin tab	External registrations
General	Brand/site name (in database)
Pricing	None — catalog in MongoDB
Payments	PayMongo / Xendit / HitPay / PayPal
Email	Resend / Postmark / SendGrid + domain verification
Support	Email delivery (same provider as above)
Meetings	Zoom / Google Cloud / Microsoft Entra
Recordings	Fathom

Recommended go-live order

1. Atlas + hosting + `NEXT_PUBLIC_APP_URL` + master keys + `ADMIN_TOKEN`
2. One payment gateway + webhooks + Payments settings + payment-holds cron
3. One email provider + verified domain + Email settings (disable sandbox when ready)
4. One meeting provider + test booking end-to-end
5. OpenAI if you want live diagnostics and advisor chat
6. GA4 if you want marketing analytics
7. Fathom only if you offer recording opt-in at checkout
8. App Store / Play Store when shipping native builds

TeqMD / it-advisory monorepo — `apps/web/.env.example` is the authoritative env template.
